## Epworth Sleepiness Scale

How likely are you to nod off or fall asleep in the following situations, in contrast to feeling just tired? This refers to your usual way of life in recent times.
Even if you haven't done some of these things recently, try to work out how they would have affected you. It is important that you answer each question as best you can.
Use the following scale to choose the most appropriate number for each situation.

|  | Would <br> never <br> nod off <br> 0 | Slight <br> chance of <br> nodding off <br> 1 | Moderate <br> chance of <br> nodding off <br> 2 | High chance <br> of nodding off <br> 3 |
| :--- | :---: | :---: | :---: | :---: |
| Sitting and reading |  |  |  |  |
| Watching TV |  |  |  |  |
| Sitting, inactive, in a public place <br> (e.g., in a meeting, theater, or <br> dinner event) |  |  |  |  |
| As a passenger in a car for an <br> hour or more without stopping <br> for a break |  |  |  |  |
| Lying down to rest when <br> circumstances permit |  |  |  |  |
| Sitting and talking to someone |  |  |  |  |
| Sitting quietly after a meal <br> without alcohol |  |  |  |  |
| In a car, while stopped for a few <br> minutes in traffic or at a light |  |  |  |  |

## Total Score =

$\qquad$

Interpretation:
0-7: It is unlikely that you are abnormally sleepy
8-9: You have an average amount of daytime sleepiness.
10-15: You may be excessively sleepy depending on the situation. You may want to consider seeking medical attention
16-24: You are excessively sleepy and should consider seeking medical attention
